THE PROBLEM, AND WHO'S AFFECTED

- IN THE HOSTEL, REPAIR REQUESTS GO INTO A PHYSICAL BOOK AT THE OFFICE — BUT NOTHING TRACKS WHAT HAPPENS AFTER IT'S WRITTEN DOWN**
- IN LECTURE HALLS OR RESTROOMS IN THE COLLEGE CAMPUS**
- AFFECTED : HOSTEL STUDENTS AND EVERYONE USING LECTURE HALLS**

THE SCALE

SOMETHINGS ALWAYS BREAKSDOWN AT HOSTEL ROOMS AND RESTROOMS AND
EVEN IN LECTURE HALLS

USUALLY THE SAME FEW THINGS: FANS, TAPS, LIGHTS
WITH NO TRACKING, NOT EVEN THE VC HAS A CLEAR PICTURE OF WHAT'S
ACTUALLY PENDING

A single, visible list — covering the hostel and every classroom — where each broken item is logged and its status kept updated until it's actually fixed.

- Not a new app or system — it's the same book already used in the office, just extended
- One added column tracks status, so a complaint stops disappearing the moment it's written down

Extend the same process already used in the hostel — just wider, and with one added column.

- Placed in the office
- One column added : status — Reported → Assigned → Fixed, with date
- The VC updates it exactly when he already assigns or hears about a repair — no extra step for him

Costs next to nothing, and changes nothing the VC already relies on.

- Same book/log format, one added column — nothing new to learn
- Rough cost: under ₹500 one-time, nothing recurring
 - No new hires, no new process to adopt

Every reported issue becomes visible, instead of disappearing into a book or nowhere at all.

- Lecture halls get a reporting channel for the first time
- Students stop guessing whether they were even heard
- The VC gets a record he can check, not just remember

This makes the wait visible — it doesn't make repairs faster.

- Still depends on the VC actually updating the log promptly
 - Doesn't add staff or budget to fix things quicker
